

ADVANCED MULTI-MODAL DIAGNOSTIC REPORT

Brain Tumor FL-XAI Clinical Assessment System

1. Patient Clinical Profile

- Patient Reg ID: PAT-2026-001
- Patient Age: 30 years
- History of Focal Seizures / GCTS: Yes (Active)
- Diabetes Mellitus Status: Uncontrolled (High Risk)

2. AI Multi-Modal MRI Analysis & Prediction

- Neuroimaging Primary Result: No Tumor (Normal Structure)
- Model Confidence Score: 31.37%
- Metabolic Seizure Trigger Risk: 90.0%

3. Clinical Impression & Action Plan

- Structural Integrity: No evidence of mass lesion, hemorrhage, or tumor in brain.
- Etiology: Seizures are non-structural, likely induced by glycemic fluctuations.
- Plan: 1. Strict Blood Sugar Management (HbA1c & Fasting Glucose).
2. Neurologist Consultation for Anti-Epileptic Drug (AED) titration.
